BARCELONA DECLARATION CONFERENCE · BERLIN · 24–25 NOVEMBER 2026

Where do PIDs actually break?

ORI Quality Monitoring: lessons from monitoring and improving the quality of Dutch open research information

Maurice Vanderfeesten · SURF · maurice.vanderfeesten@surf.nl

AMBITION

Turn Barcelona Declaration commitments into concrete, institution-level goals for better open research information

The ORI dashboard was co-designed with the Dutch Barcelona Declaration signatories, so what gets measured reflects where better metadata brings real value, and what it takes to close the gaps.

From consultation to metrics to dashboard

Consult

14 use cases

From 10 organisations. Fix three elements first: **DOIs**, **ROR** and **ORCID**.

doi.org/10.5281/zenodo.18667698

Measure

Metrics

What to measure and how: CRIS compared with OpenAlex, OpenAIRE and Crossref.

doi.org/10.5281/zenodo.23682960

Monitor

Dashboard

Your gaps on four dimensions, each linked to interventions with effort and impact.

ori-dashboard.surf.nl

Improve

Set goals

Onboarding helps signatories set goals and track their interventions.

18 organisations taking part

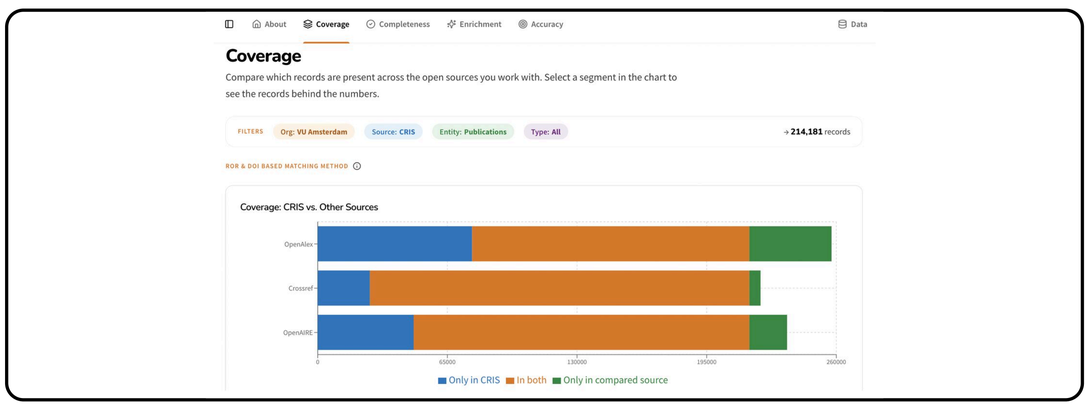

Four questions every institution can now answer

Example views from the dashboard (illustrative data, from the metrics report)

COVERAGE

Is our output in the open indexes?

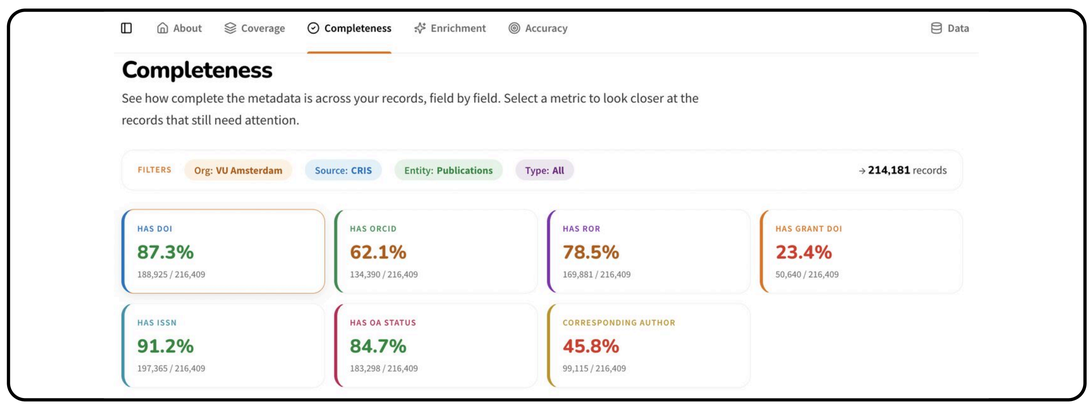

Records only in your CRIS, in both, or only in OpenAlex, Crossref or OpenAIRE.

COMPLETENESS

How many records lack an ORCID?

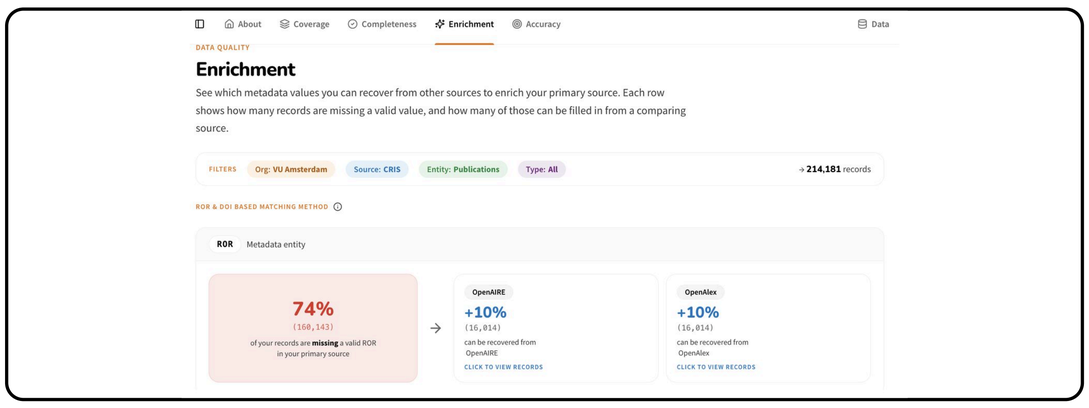

The share of records with a valid DOI, ORCID, ROR, grant DOI, ISSN, OA status and corresponding author.

ENRICHMENT

What can other sources fill in?

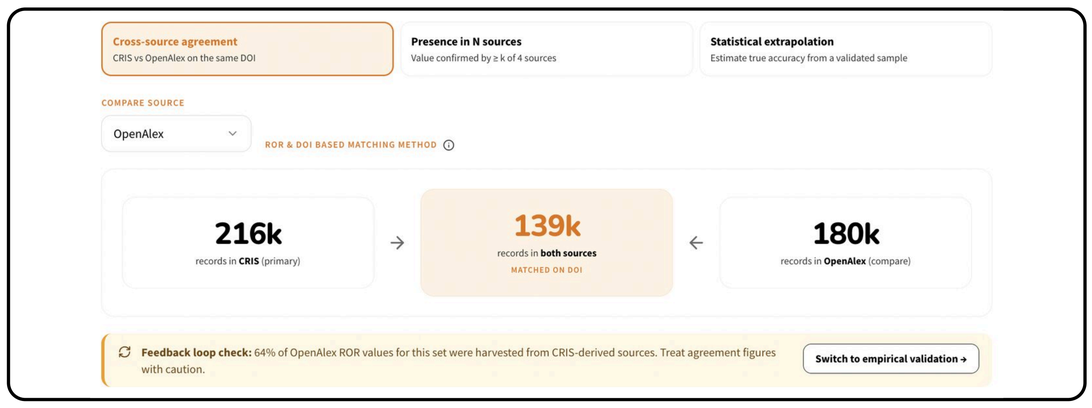

Missing values in your source that OpenAIRE or OpenAlex already have, ready to recover.

ACCURACY

Is that ROR affiliation right?

Where sources disagree, and which one is wrong: checked against raw affiliation strings.

Fully open, behind the scenes

- A public data lake with OpenAlex, OpenAIRE, CRIS and OpenAPC: every number is reproducible.
- Skills and an MCP server let non-technical users build auditable reports.

What worked

- Co-design gave metrics that institutions recognise.
- Linking gaps to effort shows where to act.

What was hard

- Accuracy has no single ground truth.
- Sources copy each other, and their errors.

What's next

- BROCCOLI maintains the dashboard and data lake.
- Long-term governance in DURF.

Sep 2025 — Project start, funded by UNL

Feb 2026 — Framework report

Apr 2026 — Data lake filled, AI tools

Sep 2026 — Dashboard in production

Oct 2026 — Metrics report, onboarding

Nov 2026 — Berlin: your feedback

Set your own goals for better open research information

ori-dashboard.surf.nl · surf-ori.github.io/pid2portal-project

Part of the PID to Portal project, led by SURF and funded by Universities of the Netherlands (UNL). Reports by Bianca Kramer (Sesame Open Science). All code, data and reports are open.
